SUPPLY CHAIN CYBER SECURITY MADE EASY

What we've learned from helping over 200 companies and
their 3000 vendors to improve their security

Cyber security has not been easy

“Our core business takes all our time. How could we find the time for cyber security?”

“Cyber security is expensive, and procuring each service from different vendors is laborious.”

“There are a number of tasks we need to do. What should we do now and what later? How can we accomplish tasks fast?”

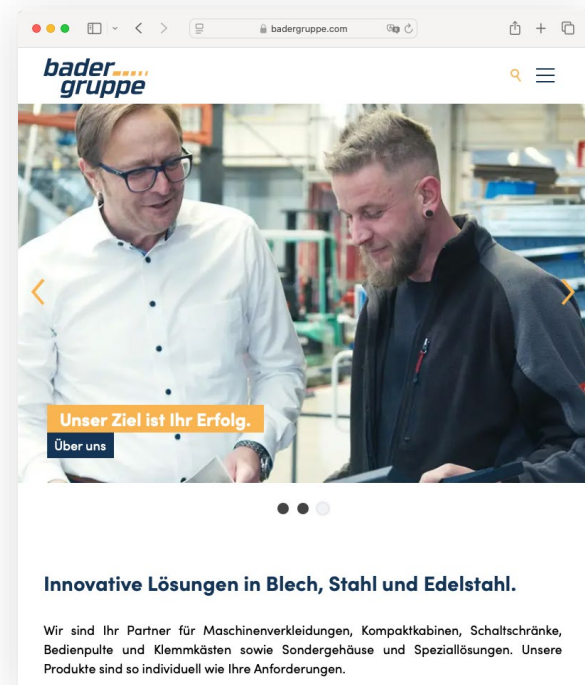

Accomplish cyber security tasks effectively and cost-effectively

For the cost of a single consultative gap-analysis interview, I can implement three carefully designed practical improvements that drive immediate practical results. Badrap's cybersecurity playbooks help us to achieve a range of cybersecurity goals in a practical and effective way without disrupting day-to-day operations.

Philips coordinated vulnerability disclosure Hall of Honors

Philips would like to recognize and thank all the researchers who have submitted a vulnerability report and cooperated with us. For those who want to be listed in our Hall of Honors we will list the first reporter of a new acknowledged vulnerability. Thanks to all for their participation, and have made a disclosure to us to help keep the internet and our customers and patients safe.
